

Folio PDF fixture — page 1 of 3

This document exists so that opening a `.pdf` from the files column can be checked end to end: the page lane mints one `file:` URL, the engine's own reader draws it, and the head and the foot name the file on disk.

What to look for

- The reader's toolbar says **1 of 3**.
- This paragraph is legible — a reader that loaded but could not reach the document draws its own "File not found" plate instead.
- The address row shows the OS spelling of the path, not a `file:///` URL.

Page 2 of 3 — a table and a plate

Two shapes that exercise more of the renderer than a paragraph does.

Surface	What it should say
Head title	folio-pdf-test.pdf
Address row	...\test-assets\folio-pdf-test.pdf
Foot	the same path

Page 3 of 3 — the end

Scrolling to here proves the reader has the whole document and not just its first page.
